

CHINESE NEW YEAR 2027

Plan Ahead. Protect Your PCB Supply.

While the official public holiday window is February 5–12, individual PCB manufacturers may set their own shutdown and production schedules. With material shortages, constrained manufacturing capacity, and the upcoming holiday, early planning is more important than ever.

WHY CUSTOMERS SHOULD ACT NOW

MATERIAL SHORTAGES

Limited availability of certain PCB materials can make last-minute production more difficult.

MANUFACTURING CAPACITY

Factory schedules begin filling well ahead of the holiday.

LONGER LEAD TIMES

Production shutdowns and post-holiday ramp-up can extend overall lead times.

FEWER OPTIONS

Waiting until January may limit available materials, factories, and production windows.

MCL RECOMMENDATION:

GET ORDERS IN BY SEPTEMBER 30, 2026

GET AHEAD OF THE HOLIDAY WITH MCL:

- Plan production around factory shutdowns
- Monitor material availability
- Secure production capacity earlier
- Evaluate alternate materials and sourcing options
- Build inventory ahead of the holiday
- Explore domestic and alternative manufacturing options
